3. Ejercicio (1)	10
4. Ejercicio (2)	11
5. Otras soluciones	12
6. Referencias	13

## 1. Exportar datos

- Se utiliza el comando `expdp`
  - Ayuda con `expdp help=yes`
  - Es necesario crear antes el **directory** de **Oracle**

```
Export: Release 12.1.0.2.0 - Production on Fri Dec 16 13:32:15 2016

Copyright (c) 1982, 2015, Oracle and/or its affiliates. All rights reserved.

The Data Pump export utility provides a mechanism for transferring data objects
between Oracle databases. The utility is invoked with the following command:

    Example: expdp scott/tiger DIRECTORY=dmpdir DUMPFILE=scott.dmp

You can control how Export runs by entering the 'expdp' command followed
by various parameters. To specify parameters, you use keywords:

    Format: expdp KEYWORD=value or KEYWORD=(value1,value2,...,valueN)
    Example: expdp scott/tiger DUMPFILE=scott.dmp DIRECTORY=dmpdir SCHEMAS=scott
              or TABLES=(T1:P1,T1:P2), if T1 is partitioned table

USERID must be the first parameter on the command line.

-----

The available keywords and their descriptions follow. Default values are listed within square brackets.

ABORT_STEP
Stop the job after it is initialized or at the indicated object.
```

---

Valid values are -1 or N where N is zero or greater.  
N corresponds to the object's process order number in the master table.

**ACCESS\_METHOD**  
Instructs Export to use a particular method to unload data.  
Valid keyword values are: [AUTOMATIC], DIRECT\_PATH and EXTERNAL\_TABLE.

**ATTACH**  
Attach to an existing job.  
For example, ATTACH=job\_name.

**CLUSTER**  
Utilize cluster resources and distribute workers across the Oracle RAC [YES].

**COMPRESSION**  
Reduce the size of a dump file.  
Valid keyword values are: ALL, DATA\_ONLY, [METADATA\_ONLY] and NONE.

**COMPRESSION\_ALGORITHM**  
Specify the compression algorithm that should be used.  
Valid keyword values are: [BASIC], LOW, MEDIUM and HIGH.

**CONTENT**  
Specifies data to unload.  
Valid keyword values are: [ALL], DATA\_ONLY and METADATA\_ONLY.

**DATA\_OPTIONS**  
Data layer option flags.  
Valid keyword values are: XML\_CLOBS.

**DIRECTORY**  
Directory object to be used for dump and log files.

**DUMPFIL**  
Specify list of destination dump file names [expdat.dmp].  
For example, DUMPFIL=scott1.dmp, scott2.dmp, dmpdir:scott3.dmp.

**ENCRYPTION**  
Encrypt part or all of a dump file.  
Valid keyword values are: ALL, DATA\_ONLY, ENCRYPTED\_COLUMNS\_ONLY, METADATA\_ONLY and NONE.

**ENCRYPTION\_ALGORITHM**  
Specify how encryption should be done.  
Valid keyword values are: [AES128], AES192 and AES256.

**ENCRYPTION\_MODE**  
Method of generating encryption key.  
Valid keyword values are: DUAL, PASSWORD and [TRANSPARENT].

**ENCRYPTION\_PASSWORD**  
Password key for creating encrypted data within a dump file.

**ENCRYPTION\_PWD\_PROMPT**  
Specifies whether to prompt for the encryption password [NO].  
Terminal echo will be suppressed while standard input is read.

**ESTIMATE**  
Calculate job estimates.  
Valid keyword values are: [BLOCKS] and STATISTICS.

**ESTIMATE\_ONLY**  
Calculate job estimates without performing the export [NO].

**EXCLUDE**  
Exclude specific object types.  
For example, EXCLUDE=SCHEMA:"='HR'".

**FILESIZE**  
Specify the size of each dump file in units of bytes.

**FLASHBACK\_SCN**  
SCN used to reset session snapshot.

---

FLASHBACK\_TIME  
Time used to find the closest corresponding SCN value.

FULL  
Export entire database [NO].

HELP  
Display Help messages [NO].

INCLUDE  
Include specific object types.  
For example, INCLUDE=TABLE\_DATA.

JOB\_NAME  
Name of export job to create.

KEEP\_MASTER  
Retain the master table after an export job that completes successfully [NO].

LOGFILE  
Specify log file name [export.log].

LOGTIME  
Specifies that messages displayed during export operations be timestamped.  
Valid keyword values are: ALL, [NONE], LOGFILE and STATUS.

METRICS  
Report additional job information to the export log file [NO].

NETWORK\_LINK  
Name of remote database link to the source system.

NOLOGFILE  
Do not write log file [NO].

PARALLEL  
Change the number of active workers for current job.

PARFILE  
Specify parameter file name.

QUERY  
Predicate clause used to export a subset of a table.  
For example, QUERY=employees:"WHERE department\_id > 10".

REMAP\_DATA  
Specify a data conversion function.  
For example, REMAP\_DATA=EMP.EMPNO:REMAPPKG.EMPNO.

REUSE\_DUMPFILES  
Overwrite destination dump file if it exists [NO].

SAMPLE  
Percentage of data to be exported.

SCHEMAS  
List of schemas to export [login schema].

SERVICE\_NAME  
Name of an active Service and associated resource group to constrain Oracle RAC resources.

SOURCE\_EDITION  
Edition to be used for extracting metadata.

STATUS  
Frequency (secs) job status is to be monitored where  
the default [0] will show new status when available.

TABLES  
Identifies a list of tables to export.  
For example, TABLES=HR.EMPLOYEES,SH.SALES:SALES\_1995.

---

```

TABLESPACES
Identifies a list of tablespaces to export.

TRANSPORTABLE
Specify whether transportable method can be used.
Valid keyword values are: ALWAYS and [NEVER].

TRANSPORT_FULL_CHECK
Verify storage segments of all tables [NO].

TRANSPORT_TABLESPACES
List of tablespaces from which metadata will be unloaded.

VERSION
Version of objects to export.
Valid keyword values are: [COMPATIBLE], LATEST or any valid database version.

VIEWS_AS_TABLES
Identifies one or more views to be exported as tables.
For example, VIEWS_AS_TABLES=HR.EMP_DETAILS_VIEW.

-----

The following commands are valid while in interactive mode.
Note: abbreviations are allowed.

ADD_FILE
Add dumpfile to dumpfile set.

CONTINUE_CLIENT
Return to logging mode. Job will be restarted if idle.

EXIT_CLIENT
Quit client session and leave job running.

FILESIZE
Default filesize (bytes) for subsequent ADD_FILE commands.

HELP
Summarize interactive commands.

KILL_JOB
Detach and delete job.

PARALLEL
Change the number of active workers for current job.

REUSE_DUMPFILLES
Overwrite destination dump file if it exists [NO].

START_JOB
Start or resume current job.
Valid keyword values are: SKIP_CURRENT.

STATUS
Frequency (secs) job status is to be monitored where
the default [0] will show new status when available.

STOP_JOB
Orderly shutdown of job execution and exits the client.
Valid keyword values are: IMMEDIATE.

```

## 1.1. directory de Oracle

- Algunos comandos de **Oracle** necesitan trabajar sobre directorios del disco
- A veces no interesa que los usuarios conozcan/decidan los directorios

- para no llenar una partición
- para no divulgar información de la base de datos
- para no acceder a directorios donde **Oracle** puede, pero el usuario no

## 1.2. Definir un directorio

```
grant create any directory to unusuario;
create directory mi_directorio_de_backup as '/home/alumno/backups';
```

```
GRANT READ, WRITE ON DIRECTORY mi_directorio_de_backup TO usuario;
```

## 1.3. Caracteres de escape

- A veces hay que pasar parámetros con espacios u otros caracteres especiales
- En bash se haría con comillas "dobles." o 'simples'
- expdp maneja por sí mismo las comillas, así que hay que escaparlas en bash

```
expdp \'sys/alumno@localhost:1521/orclpdb1 as sysdba\' DIRECTORY=datos DUMPFILE=\'con espacios.dmp\'
```

## 1.4. Ejemplo de exportación

```
[alumno@centos-asgbd ~]$ expdp alumno/alumno directory=mi_directorio_de_backup schemas=alumno dumpfile=alumno.
↳ dmp logfile=alumno.log
Export: Release 12.1.0.2.0 - Production on Fri Dec 16 13:07:26 2016

## 2. Importar datos

- Se utiliza el comando `impdp`
  - Ayuda con `impdp help=yes`

```
Import: Release 12.1.0.2.0 - Production on Fri Dec 16 13:31:18 2016

Copyright (c) 1982, 2015, Oracle and/or its affiliates. All rights reserved.

The Data Pump Import utility provides a mechanism for transferring data objects
between Oracle databases. The utility is invoked with the following command:

    Example: impdp scott/tiger DIRECTORY=dmpdir DUMPFILE=scott.dmp

You can control how Import runs by entering the 'impdp' command followed
by various parameters. To specify parameters, you use keywords:

    Format:  impdp KEYWORD=value or KEYWORD=(value1,value2,...,valueN)
    Example: impdp scott/tiger DIRECTORY=dmpdir DUMPFILE=scott.dmp

USERID must be the first parameter on the command line.

-----

The available keywords and their descriptions follow. Default values are listed within square brackets.

ABORT_STEP
Stop the job after it is initialized or at the indicated object.
Valid values are -1 or N where N is zero or greater.
N corresponds to the object's process order number in the master table.

ACCESS_METHOD
Instructs Import to use a particular method to load data.
Valid keyword values are: [AUTOMATIC], CONVENTIONAL, DIRECT_PATH
and EXTERNAL_TABLE.

ATTACH
Attach to an existing job.
For example, ATTACH=job_name.

CLUSTER
Utilize cluster resources and distribute workers across the Oracle RAC [YES].

CONTENT
Specifies data to load.
Valid keywords are: [ALL], DATA_ONLY and METADATA_ONLY.

DATA_OPTIONS
Data layer option flags.
Valid keywords are: DISABLE_APPEND_HINT and SKIP_CONSTRAINT_ERRORS.

DIRECTORY
Directory object to be used for dump, log and SQL files.

DUMPFILE
List of dump files to import from [expdat.dmp].
For example, DUMPFILE=scott1.dmp, scott2.dmp, dmpdir:scott3.dmp.

ENCRYPTION_PASSWORD
Password key for accessing encrypted data within a dump file.
Not valid for network import jobs.

ENCRYPTION_PWD_PROMPT
Specifies whether to prompt for the encryption password [NO].
Terminal echo will be suppressed while standard input is read.

ESTIMATE
```

---

Calculate network job estimates.  
Valid keywords are: [BLOCKS] and STATISTICS.

EXCLUDE  
Exclude specific object types.  
For example, EXCLUDE=SCHEMA:"='HR'".

FLASHBACK\_SCN  
SCN used to reset session snapshot.

FLASHBACK\_TIME  
Time used to find the closest corresponding SCN value.

FULL  
Import everything from source [YES].

HELP  
Display help messages [NO].

INCLUDE  
Include specific object types.  
For example, INCLUDE=TABLE\_DATA.

JOB\_NAME  
Name of import job to create.

KEEP\_MASTER  
Retain the master table after an import job that completes successfully [NO].

LOGFILE  
Log file name [import.log].

LOGTIME  
Specifies that messages displayed during import operations be timestamped.  
Valid keyword values are: ALL, [NONE], LOGFILE and STATUS.

MASTER\_ONLY  
Import just the master table and then stop the job [NO].

METRICS  
Report additional job information to the import log file [NO].

NETWORK\_LINK  
Name of remote database link to the source system.

NOLOGFILE  
Do not write log file [NO].

PARALLEL  
Change the number of active workers for current job.

PARFILE  
Specify parameter file.

PARTITION\_OPTIONS  
Specify how partitions should be transformed.  
Valid keywords are: DEPARTITION, MERGE and [NONE].

QUERY  
Predicate clause used to import a subset of a table.  
For example, QUERY=employees:"WHERE department\_id > 10".

REMAP\_DATA  
Specify a data conversion function.  
For example, REMAP\_DATA=EMP.EMPNO:REMAPPKG.EMPNO.

REMAP\_DATAFILE  
Redefine data file references in all DDL statements.

REMAP\_SCHEMA  
Objects from one schema are loaded into another schema.

---

**REMAP\_TABLE**  
Table names are remapped to another table.  
For example, REMAP\_TABLE=HR.EMPLOYEES:EMPS.

**REMAP\_TABLESPACE**  
Tablespace objects are remapped to another tablespace.

**REUSE\_DATAFILES**  
Tablespace will be initialized if it already exists [NO].

**SCHEMAS**  
List of schemas to import.

**SERVICE\_NAME**  
Name of an active Service and associated resource group to constrain Oracle RAC resources.

**SKIP\_UNUSABLE\_INDEXES**  
Skip indexes that were set to the Index Unusable state.

**SOURCE\_EDITION**  
Edition to be used for extracting metadata.

**SQLFILE**  
Write all the SQL DDL to a specified file.

**STATUS**  
Frequency (secs) job status is to be monitored where the default [0] will show new status when available.

**STREAMS\_CONFIGURATION**  
Enable the loading of Streams metadata [YES].

**TABLE\_EXISTS\_ACTION**  
Action to take if imported object already exists.  
Valid keywords are: APPEND, REPLACE, [SKIP] and TRUNCATE.

**TABLES**  
Identifies a list of tables to import.  
For example, TABLES=HR.EMPLOYEES,SH.SALES:SALES\_1995.

**TABLESPACES**  
Identifies a list of tablespaces to import.

**TARGET\_EDITION**  
Edition to be used for loading metadata.

**TRANSFORM**  
Metadata transform to apply to applicable objects.  
Valid keywords are: DISABLE\_ARCHIVE\_LOGGING, INMEMORY, INMEMORY\_CLAUSE, LOB\_STORAGE, OID, PCTSPACE, SEGMENT\_ATTRIBUTES, STORAGE, and TABLE\_COMPRESSION\_CLAUSE.

**TRANSPORTABLE**  
Options for choosing transportable data movement.  
Valid keywords are: ALWAYS and [NEVER].  
Only valid in NETWORK\_LINK mode import operations.

**TRANSPORT\_DATAFILES**  
List of data files to be imported by transportable mode.

**TRANSPORT\_FULL\_CHECK**  
Verify storage segments of all tables [NO].  
Only valid in NETWORK\_LINK mode import operations.

**TRANSPORT\_TABLESPACES**  
List of tablespaces from which metadata will be loaded.  
Only valid in NETWORK\_LINK mode import operations.

**VERSION**  
Version of objects to import.  
Valid keywords are: [COMPATIBLE], LATEST, or any valid database version.  
Only valid for NETWORK\_LINK and SQLFILE.

---

```
VIEWS_AS_TABLES
Identifies one or more views to be imported as tables.
For example, VIEWS_AS_TABLES=HR.EMP_DETAILS_VIEW.
Note that in network import mode, a table name may be appended
to the view name.
```

```
-----

The following commands are valid while in interactive mode.
Note: abbreviations are allowed.
```

```
CONTINUE_CLIENT
Return to logging mode. Job will be restarted if idle.
```

```
EXIT_CLIENT
Quit client session and leave job running.
```

```
HELP
Summarize interactive commands.
```

```
KILL_JOB
Detach and delete job.
```

```
PARALLEL
Change the number of active workers for current job.
```

```
START_JOB
Start or resume current job.
Valid keywords are: SKIP_CURRENT.
```

```
STATUS
Frequency (secs) job status is to be monitored where
the default [0] will show new status when available.
```

```
STOP_JOB
Orderly shutdown of job execution and exits the client.
Valid keywords are: IMMEDIATE.
```

## 2.1. Importar un schema en otro schema

- Importar un fichero del usuario profesor en el usuario alumno

```
impdp system/alumno SCHEMAS=alumno remap_schema=alumno:profesor \
        directory=EXPORTDIR \
        dumpfile=profesor.dmp
```

```
[alumno@centos-asgbd backups]$ impdp system/alumno schemas=profesor remap_schema=profesor:alumno directory=
↪ mi_directorio_de_backup dumpfile=profesor.dmp
```

```
Import: Release 12.1.0.2.0 - Production on Fri Dec 16 13:23:38 2016
```

```
Copyright (c) 1982, 2015, Oracle and/or its affiliates. All rights reserved.
```

```
Connected to: Oracle Database 12c Standard Edition Release 12.1.0.2.0 - 64bit Production
```

```
Master table "SYSTEM"."SYS_IMPORT_SCHEMA_01" successfully loaded/unloaded
```

```
Starting "SYSTEM"."SYS_IMPORT_SCHEMA_01": system/***** schemas=profesor remap_schema=profesor:alumno
↪ directory=mi_directorio_de_backup dumpfile=profesor.dmp
```

```
p
```

```
Processing object type SCHEMA_EXPORT/PRE_SCHEMA/PROCACT_SCHEMA
```

```
Processing object type SCHEMA_EXPORT/TABLE/TABLE
```

```
Processing object type SCHEMA_EXPORT/TABLE/TABLE_DATA
```

```
.. imported "ALUMNO"."MATRICULAS"          6.523 KB      44 rows
.. imported "ALUMNO"."MULTAS"              8.195 KB      35 rows
.. imported "ALUMNO"."PERSONAS"           6.875 KB      47 rows
```

```
Processing object type SCHEMA_EXPORT/TABLE/GRANT/OWNER_GRANT/OBJECT_GRANT
```

```
Processing object type SCHEMA_EXPORT/TABLE/INDEX/INDEX
```

```
Processing object type SCHEMA_EXPORT/TABLE/CONSTRAINT/CONSTRAINT
```

---

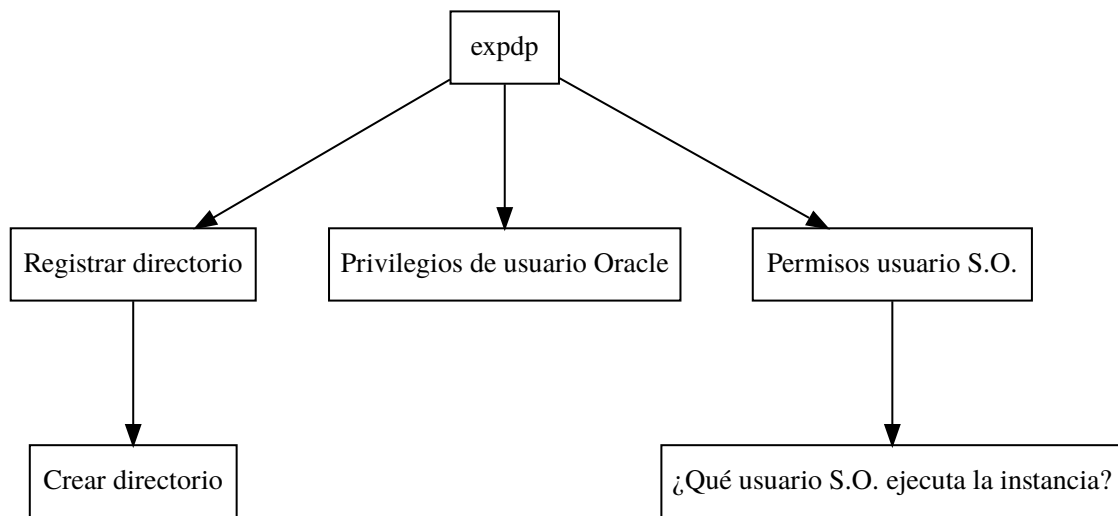

```
Processing object type SCHEMA_EXPORT/TABLE/INDEX/STATISTICS/INDEX_STATISTICS
Processing object type SCHEMA_EXPORT/TABLE/CONSTRAINT/REF_CONSTRAINT
Processing object type SCHEMA_EXPORT/TABLE/STATISTICS/TABLE_STATISTICS
Processing object type SCHEMA_EXPORT/STATISTICS/MARKER
Job "SYSTEM"."SYS_IMPORT_SCHEMA_01" successfully completed at Fri Dec 16 13:23:58 2016 elapsed 0 00:00:19
```

Permiso para cambiar schema

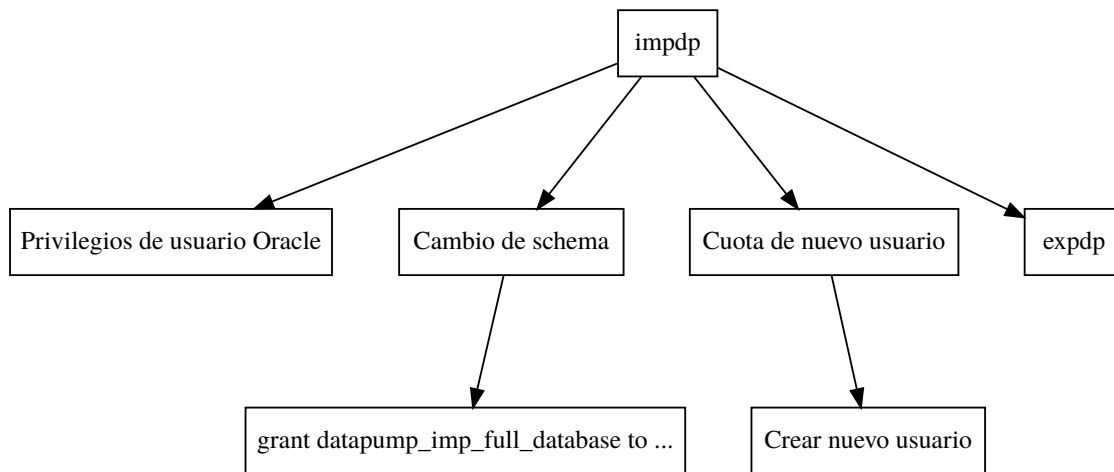

### 3. Ejercicio (1)

- Crea la base de datos de multas en el usuario multas (`../1/sql/multas.sql`)
- Exporta la base de datos al fichero `/datos/exports/multas.dump`
- Importa las tablas en el usuario copiamultas

#### 3.1. Tareas para la exportación

### 3.2. Tareas para la importación

## 4. Ejercicio (2)

### 1. Crear la base de datos

- Con la base de datos de carreras ([../1/sql/carreras-coches.sql](#))
- Crear el usuario CARRERAS y ejecutar el *script* SQL

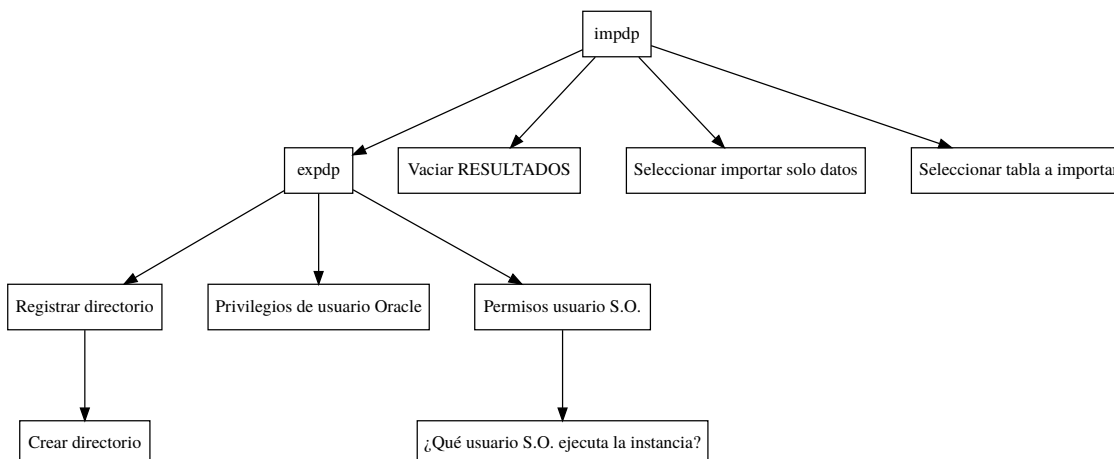

### 2. Exportar

- Exportar las tablas del usuario CARRERAS al fichero `carreras.dmp`

### 3. Importar

- Borrar las filas de la tabla `CARRERAS.RESULTADOS`
- Importar los datos desde `carreras.dmp`

### 4.1. Tareas

---

## 5. Otras soluciones

- RMAN
- Copias de *tablespaces*

### 5.1. RMAN

- Solución de [Oracle para backups](#)
- Ventajas
  - Granularidad del backup: incrementales o totales
  - En línea
- Desventajas
  - Mayor complejidad

### 5.2. Copias de *tablespaces*

- Los datos están en ficheros dbf
- Basta con hacer copias de esos ficheros
- Ventajas
  - Fácil, no se necesitan herramientas especiales
- Desventajas
  - Muchas veces es necesario parar Oracle para hacer la copia y la restauración

Fuente: [docs.oracle.com](https://docs.oracle.com)

#### 5.2.1. Lista de ficheros a copiar

- El fichero pfile o spfile indica dónde está el fichero de control
  - Generalmente en \$ORACLE\_HOME/dbs/spfile.ora
  - SHOW PARAMETER spfile;
- El fichero de control indica dónde están los ficheros de datos
- Los tablespaces system tienen los metadatos necesarios para entender los tablespaces de datos

```
select 'datos', name from v$datafile
union
select 'temporal', name from v$tempfile
union
select 'redo', member from v$logfile
union
select 'control', name from v$controlfile
union
select 'spfile', value from v$parameter where name='spfile';
```

---

### 5.2.2. Arrancar la base de datos

Si solo se restauran los ficheros de datos (y se tienen suficientes ficheros de log)

```
SQL> startup mount
ORACLE instance started.

Total System Global Area  264241152 bytes
Fixed Size                1286916 bytes
Variable Size            205524220 bytes
Database Buffers          54525952 bytes
Redo Buffers               2904064 bytes
Database mounted.
SQL> recover database until cancel;
Media recovery complete.
SQL> alter database open resetlogs;

Database altered.

SQL>
```

### 5.3. Ejercicio

1. Localiza los ficheros de datos de tu instancia
2. Apaga la instancia y haz una copia de los ficheros
3. Arranca la instancia, y realiza cambios en la base de datos
4. Apaga la instancia e intenta recuperar los ficheros de datos
5. Arranca la instancia, y comprueba que todo sigue como antes del paso 1
